RAC Parking Report Automation—Queries for RAC, round 4

mz

21.3.2019

Both the Wales and the Scotland reports there is a sentence along the lines of "a, b and c collect XX% of the parking income, event thought they only have YY % of the population". The England report instead has the sentence ending with "ZZ % of the cars".

23. Is this potentially something you might want to remove from the reports?

24. If not, is this something you might want to make consistent between the reports i.e. comparing to population or to cars in all three reports?

25. If the comparator is cars, is it OK if this value is manually inserted?

26. General (rethorical) question: If I find similar inconsistencies, e.g. where one report is missing a sentence/paragraph that the others have, should I aim to make the three reports as similar to eachother, to the extent possible?
